

Technical Agricultural Vocabulary

Greenhouse / Hydroponic Farming & Tools

Inglés Técnico para el Agro — Invernaderos, Cultivos Hidropónicos y Herramientas

English Term	Español	Definition / Definición
Greenhouse		
Greenhouse	<i>Invernadero</i>	Enclosed structure with transparent walls/roof for growing plants in a controlled climate.
Grow tunnel / hoop house	<i>Túnel de cultivo</i>	Low-cost semi-circular frame covered with plastic sheeting used to protect crops.
Polycarbonate panel	<i>Panel de policarbonato</i>	Multi-layer translucent plastic panel used for greenhouse cladding; better insulation than glass.
Shade cloth / shade netting	<i>Malla sombra</i>	Woven fabric that blocks a percentage of sunlight to prevent heat stress in plants.
Ventilation flap / ridge vent	<i>Ventana cenital / ventilación de cumbrera</i>	Openings at the top of a greenhouse that allow hot air to escape and regulate temperature.
Thermal screen / thermal curtain	<i>Manta térmica</i>	Retractable screen inside a greenhouse that conserves heat at night and reduces energy costs.
Evaporative cooling pad	<i>Panel evaporativo</i>	Cellulose or paper pad through which water flows to cool incoming air via evaporation.
Exhaust fan	<i>Extractor / ventilador de extracción</i>	Fan that draws hot or humid air out of the greenhouse to maintain optimal conditions.
Heating system / radiant heater	<i>Sistema de calefacción</i>	Equipment that maintains minimum temperatures inside the greenhouse during cold periods.
Gutter / guttering	<i>Canalón / canaleta</i>	Channel along the roof to collect and redirect rainwater away from the structure.
Hydroponics		
Hydroponics	<i>Hidroponía / cultivo hidropónico</i>	A method of growing plants without soil, using nutrient-enriched water as the growing medium.
Nutrient solution	<i>Solución nutritiva</i>	Water mixed with dissolved mineral salts (macro- and micronutrients) that feeds hydroponic plants.
NFT system (Nutrient Film Technique)	<i>Sistema NFT (Técnica de Película Nutritiva)</i>	A continuous thin stream of nutrient solution flows over bare plant roots in shallow channels.
DWC (Deep Water Culture)	<i>Cultivo en agua profunda</i>	Plant roots are suspended directly in aerated nutrient solution inside a reservoir tank.
Ebb and flow / flood and drain	<i>Flujo y reflujo</i>	System that periodically floods the growing tray with nutrient solution and then drains it back.
Drip irrigation / drip system	<i>Riego por goteo</i>	Delivers nutrient solution directly to each plant's root zone through small emitters.

English Term	Español	Definition / Definición
Growing channel / gully	<i>Canal de cultivo / canaleta</i>	Sloped plastic or aluminum channels in which plants sit and nutrient solution circulates.
Net pot / net cup	<i>Vaso de red / maceta de malla</i>	Small basket-like container that holds the plant and growing medium in hydroponic systems.
Growing medium / substrate	<i>Sustrato / medio de cultivo</i>	Inert material (rockwool, perlite, clay pebbles) used to anchor roots in lieu of soil.
Rockwool / stonewool	<i>Lana de roca</i>	Spun volcanic rock fibers used as starter plugs or slabs; excellent water retention and aeration.
Clay pebbles / LECA	<i>Arcilla expandida / LECA</i>	Lightweight expanded clay aggregate; reusable growing medium with good drainage and aeration.
pH meter	<i>Medidor de pH</i>	Electronic probe that measures the acidity/alkalinity of the nutrient solution (ideal range 5.5-6.5).
EC meter / conductivity meter	<i>Medidor de conductividad eléctrica (CE)</i>	Measures the electrical conductivity of the solution, indicating total dissolved nutrient concentration.
Reservoir / tank	<i>Depósito / tanque</i>	Container that holds the nutrient solution before it is pumped to the plants.
Air stone / diffuser	<i>Piedra difusora / aerador</i>	Porous stone connected to an air pump that oxygenates the nutrient solution for root health.
Tools & Equipment		
Submersible pump / water pump	<i>Bomba sumergible</i>	Electric pump placed inside the reservoir to circulate nutrient solution through the system.
Timer / cycle timer	<i>Temporizador / timer de ciclos</i>	Programmable device that automates pump and lighting schedules in the greenhouse.
Pruning shears / secateurs	<i>Tijeras de podar / podadera</i>	Handheld cutting tool used to prune stems, branches, and leaves precisely.
Grafting knife	<i>Navaja de injerto</i>	Sharp blade used to make clean cuts when grafting plant tissue to rootstock.
Hand trowel	<i>Palín de mano / paleta</i>	Small, short-handled digging tool for transplanting seedlings and mixing growing media.
Soil moisture meter	<i>Medidor de humedad del sustrato</i>	Probe inserted into the growing medium to monitor water availability around the root zone.
Spray nozzle / misting nozzle	<i>Boquilla nebulizadora / aspersor</i>	Fine-spray attachment that delivers water or foliar nutrients as a mist.
Grow light / HPS / LED grow light	<i>Lámpara de cultivo / luz artificial de crecimiento</i>	Artificial lighting (High Pressure Sodium or LED) to supplement or replace sunlight for plant growth.
Light timer / photoperiod controller	<i>Controlador de fotoperiodo</i>	Device that automates on/off cycles of grow lights to simulate day length for flowering.
Thermometer / hygrometer	<i>Termómetro / higrómetro</i>	Instruments measuring air temperature and relative humidity inside the greenhouse.

English Term	Español	Definition / Definición
Data logger	<i>Registrador de datos</i>	Electronic device that continuously records environmental parameters (temp, humidity, CO2) over time.
Crops & Plants		
Transplanting tray / seedling tray	<i>Bandeja de semillero / bandeja de trasplante</i>	Plastic tray with individual cells for germinating seeds or rooting cuttings before transplanting.
Seedling / sprout	<i>Plántula / brote</i>	Young plant that has germinated and developed its first true leaves.
Cutting / clone	<i>Esqueje / corte vegetativo</i>	A stem or leaf removed from a parent plant and rooted to produce a genetically identical copy.
Grafting	<i>Injerto</i>	Joining a scion (shoot) from one plant to the rootstock of another to combine desirable traits.
Pollination	<i>Polinización</i>	Transfer of pollen to fertilize flowers, often assisted manually or by bumblebees in greenhouses.
Photoperiod	<i>Fotoperiodo</i>	The number of hours of light a plant receives per day; controls vegetative growth vs. flowering.
Canopy management	<i>Manejo del dosel / canopia</i>	Techniques (topping, pruning, trellising) to control plant height and maximize light distribution.
Training wire / trellis wire	<i>Alambre guía / espaldera</i>	Horizontal wires strung across the greenhouse to support climbing or sprawling crop plants.
Integrated Pest Management (IPM)	<i>Manejo Integrado de Plagas (MIP)</i>	Strategy combining biological, cultural, and chemical methods to control pests with minimal pesticide use.
Soil & Nutrients		
Macro nutrients	<i>Macronutrientes</i>	Elements needed in large quantities: nitrogen (N), phosphorus (P), and potassium (K).
Micro nutrients / trace elements	<i>Micronutrientes / elementos traza</i>	Elements needed in small amounts: iron, manganese, zinc, copper, boron, molybdenum.
pH buffering	<i>Tampon de pH / ajuste de pH</i>	Adding pH-up or pH-down solutions to keep the nutrient solution within the optimal range.
EC (Electrical Conductivity)	<i>CE (Conductividad Eléctrica)</i>	Measure of the total dissolved salts in the nutrient solution; guides fertilizer dosing.
Perlite	<i>Perlita</i>	Volcanic glass expanded by heat; used to improve aeration and drainage in growing media.
Vermiculite	<i>Vermiculita</i>	Expanded mica mineral that retains moisture and provides lightweight support in germination mixes.
Coco coir / coco peat	<i>Fibra de coco / turba de coco</i>	Sustainable growing medium made from coconut husk fibers; excellent water retention and aeration.
Compost / organic matter	<i>Compost / materia orgánica</i>	Decomposed plant and animal material added to soil to improve fertility and microbial activity.

English Term	Español	Definition / Definición
Beneficial microbes / biostimulants	<i>Microbios benéficos / bioestimulantes</i>	Fungi (mycorrhizae) and bacteria that colonize roots to enhance nutrient uptake and plant health.
